

// the setup function runs once
when you press reset or power
the board

```
void setup() {  
    // initialize digital pin  
    LED_BUILTIN as an output.  
    pinMode(LED_BUILTIN, OUTPUT);  
}
```

// the loop function runs over
and over again forever

```
void loop() {  
    digitalWrite(LED_BUILTIN, HIGH);  
    delay(1000);  
    digitalWrite(LED_BUILTIN, LOW);  
    delay(1000);  
}
```
