Compare!

Clear all

When you have the need to find the difference between two text files there are no inherent application in Windows that can help you achieve this goal. However, this doesn't mean that you can't complete this task efficiently as there are many free and paid solutions available. In this guide, you will learn what text file comparison means, how it can be useful and can we compare two text files with each other on a Windows computer.

What Text Files Comparison Means?

Difference between the two text files can be determined in multiple ways.

Line Comparison: This type of comparison determines if the text in a file was altered by deleting original lines and inserting different lines to create another file. A line by line comparison reveals if a group of lines were changed and in the final report you get to see the group of differing lines.

Word Comparison: Sometimes the difference in two files is in the way words are arranged in them. Therefore, the sequence of words need to be analysed to find whether two text files are identical or not.

There can be many other differences, such as the difference in alphabetic case, the difference in empty space between lines and words, etc. When you are comparing two text

When you have the need to find the difference between two text files there are no inherent application in Windows that can help you achieve this goal. In this guide, you will learn what text file comparison means, how it can be useful and can we compare two text files with each other on a Windows computer.

Why Compare Text Files?

There can be several reasons for comparing two text files. Some of the most prominent reasons are mentioned below:

Detect Plagiarism: This is the first thing that would come in your mind when you think about the reason for comparing two text file. You can use the text format of two files to determine if one is the copy of the other or not.

Verify Proofreading: Suppose you have given an editing job and you want to verify if the suggested changes have been made properly, then the fastest way to know this is by comparing the old text version with the newly edited one. This comparison will immediately tell you how many changes have been made and you can easily verify whether your suggestions were implemented or not.
