Basic HTML and HTML5: Turn an Image into a Link

You can make elements into links by nesting them within an `a` element.

Nest your image within an `a` element. Here's an example:

```
<a href="#"></a>
```

Remember to use `#` as your `a` element's `href` property in order to turn it into a dead link.

Place the existing image element within an `a` (*anchor*) element.

Once you've done this, hover over your image with your cursor. Your cursor's normal pointer should become the link clicking pointer. The photo is now a link.
