

```
1 <!DOCTYPE html>
```

```
2 <html>
```

```
3   <head>
```

```
4     <title>HTML script tag</title>
```

```
5   </head>
```

```
6   <body>
```

```
7     <button type="button" id="button_inside">Button called from ins
```

```
8     <button type="button" id="button_outside">Button called from ou
```

```
9     <script type="text/javascript">
```

```
10       document.getElementById("button_outside").onclick = function
```

```
11         alert('you called me from outside');
```

```
12       };
```

```
13     </script>
```

```
14     <script type="text/javascript"></script>
```

```
15   </body>
```

```
16 </html>
```

Here we call a external javascript file that is doing the same like the first one but for the other button
