

Working Backwards

- In mathematics, we always work backwards and forwards.
- We learn to add and subtract.
- We learn to multiply and divide.
- Starting at the end may not sound like the best place to start, but when problem-solving, it is always something to consider, as it can be as efficient in solving a problem as starting at the beginning.

"Have you ever solved a maths problem by starting at the end?"

"If the answer is 45, what could the question be?"

"Even if you have the answer, can you still solve the problem and figure out the process?"
