

Standard vertex

- $Y = x^2 - 2x - 1 \dots\dots\dots y = a(x-h)^2 + k$
- **h:** Calculate $(-b/2a)$
 - $\frac{-(-2)}{2(1)} = \frac{2}{2} = 1$
- **k:** plug answer $(-b/2a)$ into equation
 - $Y = (1)^2 - 2(1) - 1$
 - $Y = 1 - 2 - 1 = -2$
- **a:** “a” is the original “a” from standard form
 - $a = 1$
- Rewrite Equation:
 - $Y = 1(x - 1)^2 - 2$
