Calendar Interop Tools

User Availability

Exchange authentication credential generation

Generates a set of credentials for a Google Role Account.

Execute

You will need these credentials to set up the availability address space on your Exchange server.

Exchange server configuration

Assists in setting up your Exchange server for user availability lookups.

Execute

Once a set of credentials for your Google Role Account has been created, this tool will tell you how to configure your Exchange server to use them.

User availability lookup tester

Performs a user availability lookup from Google to Exchange in order to test your setup.

The test uses the Calendar Interop set up for the user that is currently signed in.

Exchange user emails (semicolon delimited if multiple):

user@altostrat.com
