Tag	Tag Name	Definition
`<p> </p>`	Paragraph	Define the start and stop of a paragraph.
`<h1> </h1>`	Heading 1	Headings can range from 1 to 6. The higher the number, the smaller the heading.
` `	Line Break	Inserts a single line break. Similar to hitting the carriage return key.
`<div> </div>`	Division	A division is a container that holds other elements. A division is helpful when separating blocks of HTML.
`<em> </em>`	Italic text	*Italic Text*, a.k.a., 'emphasized text'
`<a> </a>`	Anchor	You use the anchor tag to define what text should be clickable and where the click should take you. I navigate to the Fullstack.io website.
