# DHL Trade Automation Service: Interactive classifier

Access and validate product classification data in real-time. Product classification drives the international trade rules for each product. It also determines applicable duties and taxes. You can quickly assign Harmonised Tariff (HTS) codes on-line. Searching through stacks of tariff books is now a thing of the past!

To use this tool: In the keywords field, enter the word or text that best describes your product and click Search.

## Find product code...
