

Bug Reference	KB article number	Description	Fix area	Platform
13534591		This improvement changes the behavior of Availability Group informational messages to not be printed to the log by default: UpdateHadronTruncationLsn(X) (force=Y): Primary: Z:Z:Z Secondary: A:A:A Partial Quorum : B:B:B Aggregation: C:C:C Persistent: D:D:D	High Availability	All
13554274		This update contains an improvement for object level lock optimization on secondary replicas of Always On Availability Groups. This improvement addresses the schema lock contention on secondary replica redo, especially when the number of logical processors is large. Note This improvement replaces and removes the need for TF 1240 from KB4497705	High Availability	All
13582824		Fixes high CPU consumption on Availability Group secondary database when using multiple redo threads and uninitialized LSN, leading to extra reads under some rare scenarios	High Availability	All
13592713		Fixes access violation exception that occurs when plan cache involves sys.dm_hadr_ag_threads and sys. dm_hadr_db_threads DMVs	High Availability	All
