

0 3 1 8 *r* 5

A long division problem showing the division of 20 by 5. The divisor 5 is on the right, and the dividend 20 is on the left. A horizontal line is drawn above the dividend. The quotient is written above the line, with the digits 0, 3, 1, and 8 aligned under the first four digits of the dividend. The remainder *r* 5 is written to the right of the quotient. The division process is shown in three steps, each with a red arrow pointing down to the next step. In the first step, 6 is written under the 20, and 60 is written under the 63. In the second step, 3 is written under the 63, and 20 is written under the 60. In the third step, 1 is written under the 60, and 160 is written under the 60. The final result is 5.

20	6	3	6	5
-	6	0		
		3	6	
		2	0	
		1	6	5
		1	6	0
				5
