

Build a Scarecrow

Instructions

Print onto thick paper or card, color all the parts of the scarecrow and then carefully cut everything out.

Glue the two wooden posts together as indicated, overlapping the gray squares, so that the posts form a cross.

Attach the other scarecrow parts to match the diagram top right.

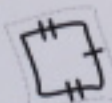

Activity Idea

Find two real sticks for your scarecrow! Tie the sticks together with string to make the cross.

Fact

Farmers make scarecrows to scare away the birds that might want to eat the crops in their fields.

Fact

Scarecrows were first made by the Egyptians.

Glue the cross post over here.

Glue this post to the vertical one so the gray squares match up.

Then glue on the scarecrow's body so it's arms sit on top of this post.
