MT SUPPORT

Hello Joe

Posts: 6513

Unfortunately, our plugin only supports 1 shortcode with [\[tribe_events\] \(Calendar View Shortcodes\)](#) per page. However, you can add multiple [Widget Shortcodes](#). I'd suggest using a combination that would meet your needs.

```
[tribe_events view="list" category="one"]
```

and

```
[tribe_events_list category="another"]
```

.

Another option is to use 1 shortcode to show both categories:

```
[tribe_events_list categories="one, another"]
```

Would these options work for you?

Thanks

Courtney 😊
