

2005 AP[®] CALCULUS AB FREE-RESPONSE QUESTIONS (Form B)

2. A water tank at Camp Newton holds 1200 gallons of water at time $t = 0$. During the time interval $0 \leq t \leq 18$ hours, water is pumped into the tank at the rate

$$W(t) = 95\sqrt{t} \sin^2\left(\frac{t}{6}\right) \text{ gallons per hour.} \leftarrow$$

During the same time interval, water is removed from the tank at the rate

$$R(t) = 275 \sin^2\left(\frac{t}{3}\right) \text{ gallons per hour.} \leftarrow$$

- (a) Is the amount of water in the tank increasing at time $t = 15$? Why or why not?
(b) To the nearest whole number, how many gallons of water are in the tank at time $t = 18$?
(c) At what time t , for $0 \leq t \leq 18$, is the amount of water in the tank at an absolute minimum? Show the work that leads to your conclusion.
(d) For $t > 18$, no water is pumped into the tank, but water continues to be removed at the rate $R(t)$ until the tank becomes empty. Let k be the time at which the tank becomes empty. Write, but do not solve, an equation involving an integral expression that can be used to find the value of k .

$$\begin{aligned} \text{C) } W(t) - R(t) &= 0 \\ t &= 0 \text{ or } t \end{aligned}$$

$$\begin{aligned} \text{A) } W(15) - R(15) &\approx -121.09 < 0 \\ \text{the water is decreasing} \end{aligned}$$

$$\begin{aligned} \text{B) } 1200 + \int_0^{18} (W(t) - R(t)) dt &\approx 1309.748 \text{ gallons} \\ &\boxed{1,310 \text{ gallons}} \end{aligned}$$
