Catch Up

a game for 2 players **Need: Counters, Dice**

Each player chooses a different START space for the game and puts a counter on it. Both players roll the dice and move forward that many spaces. Players calculate the answer to the multiplication and the player whose answer is the largest moves forward 2 spaces. Repeat and continue moving around the board and comparing answers. The winner is the player who is first to catch up to the other player or overtake the other player on the board.
