

Handwriting Legibility

With mud paper

Handwriting legibility is affected by:

- Unrecognizable letters
- Letters not uniformly placed on the line
- Letters not uniform in size
- Words squished together with no spacing

To work on learning and creating letters, there are a variety of handwriting curriculums that mostly work the same. Most kids learn best with hands on multi-sensory learning, and some kids require that hands on multi-sensory teaching in order to learn their letters.

Once a student knows the letters and how they look, and how they are made, you then want to focus on uniformity.

The rules of uniformity are:

1. All letters need to be “stuck in the mud”, which is sitting/touching the bottom writing line.
