

# USING BOOTSTRAP 3 AND SIMPLE FORM IN RAILS

## UPGRADING FROM BOOTSTRAP 2 TO 3

11. Oktober 2013 · von lukurious · in Allgemein

**Bootstrap 3** was released not so long ago. As I always like to be up-to-date with software to use the newest features I had to use it in my current Rails 4 project.

When I started the Rails 4 app I used **some tutorial(s)** from the internet to integrate bootstrap. They proposed to use Simple Form as well and so I did. I didn't realize until a few days ago that I was using the old Bootstrap 2. So this is what I had to do to upgrade to Bootstrap 3:

### Gemfile

*Note, that I am using SASS and HAML.*

Luckily, the official `bootstrap-sass` gem already integrated support for Bootstrap 3, it is not yet released to rubygems, however. So the github path needs to be added:

```
1 | gem 'bootstrap-sass', github: 'thomas-mcdonald/bootstrap-sass'
```
