

The fuel tank of Jade's car is filled with $8\frac{3}{4}$ gallons of gasoline. If Jade's car uses $\frac{7}{8}$ of a gallon of gas to get to work in the morning, how many round trips to work and home can she make using the gas she has remaining?

111

$$\frac{7}{8} + \frac{7}{8} = \frac{14}{8} = \frac{7}{4}$$
