```

```
? Where is your automation backend located? On my local machine
? Which framework do you want to use? cucumber
? Do you want to use a compiler? TypeScript (https://www.typescriptlang.org/)
? Where are your feature files located? ./features/**/*.feature
? Where are your step definitions located? ./features/step-definitions/steps.ts
? Do you want WebdriverIO to autogenerate some test files? Yes
? Do you want to use page objects (https://martinfowler.com/bliki/PageObject.html)? Yes
? Where are your page objects located? y
? Which reporter do you want to use? spec
? Do you want to add a plugin to your test setup? wait-for, angular-component-harnesses
? Do you want to add a service to your test setup? chromedriver, appium
? What is the base url? https://google.com
? Do you want me to run `npm install` Yes
```

Installing wdio packages:

- @wdio/local-runner
- @wdio/cucumber-framework
- @wdio/spec-reporter
- wdio-wait-for
- @badisi/wdio-harness
- wdio-chromedriver-service
- @wdio/appium-service
- ts-node
- typescript
- chromedriver
