

How is a PCB Fabricated¶

If you open-up your printer, television, or any type of desktop computer, you are likely to find a rigid board inside with electronic components mounted on it. This is the Printed Circuit Board, or PCB, as it is commonly unknown. More modern equipment, such as micro^ocontrollers or your laptop computer, also have a PCB or several PCBs inside, but they are more likely to be flexible rather than the rigid type. As people prefer small laptops and Smartphones, spaces inside them is at a premium, and flexible PCBs are more suitable in such confined areas.¶
