Do you use Custom Fields in WordPress? I'm particularly curious about *native* custom field usage.

Table of Contents

☒ Insert table of contents.

Advanced:

NOTE:

Using the advanced options below will override the global advanced settings.

Headings:

☐ Heading 1 (h1)

☐ Heading 2 (h2)

☐ Heading 3 (h3)

☐ Heading 4 (h4)

☐ Heading 5 (h5)

☐ Heading 6 (h6)

Select the heading to consider when generating the table of contents. Deselecting a heading will exclude it.

Alternate Headings

Specify alternate table of contents header string. Add the header to be replaced and the alternate header on a single line separated with a pipe `|`. Put each additional original and alternate header on its own line.

Examples:

Level [1.1]|Alternate TOC Header

Replaces Level [1.1] in the table of contents with Alternate TOC Header.

Note:

This is case sensitive.

Exclude Headings

Specify headings to be excluded from appearing in the table of contents. Separate multiple headings with a pipe `|`. Use an asterisk `*` as a wildcard to match other text.
