How to Add/Edit/Remove Custom Fields in WordPress

The UI for Custom Fields in WordPress looks like this

PostBlockX

SimpleTOC

☒ Remove heading

Disable the "Table of contents" block heading.

☒ Use an ordered list

Replace the tag with an tag. This adds decimal numbers to each heading in the TOC.

☒ Use absolute urls

Adds the permalink url to the fragment.

☒ Smooth scrolling support

Add the css class "smooth-scroll" to the links. This enables smooth scrolling in some themes like GeneratePress.

Maximum Level

Including H6 (Show all) ▾

Maximum depth of the headings.

Advanced ▾
