Solar Eclipse

August 21, 2017

Why is this special? Very few people have actually seen a total solar eclipse. They often occur in remote locations.

When were the last total solar eclipses in the U.S.?

The most recent total eclipses in the US were in 1979 (only in the northwest part of the country- Washington, Oregon, Idaho, Montana, North Dakota and parts of Canada) and 1991 (but only in Hawaii).

at the map above, which states will experience a total eclipse?

Kansas

Missouri

Illinois

Tennessee

Georgia

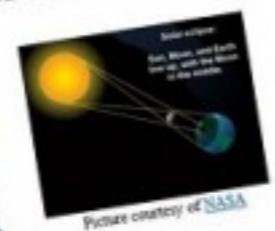

North Carolina

South Carolina

What is the difference between a solar and lunar eclipse?

What is a solar eclipse?

A solar eclipse occurs when the Moon passes between the Earth and the Sun. Blocking all or a portion of the Sun. It is the Sun that is being "eclipsed" (moving hidden or blocked from sight).

What is a lunar eclipse?

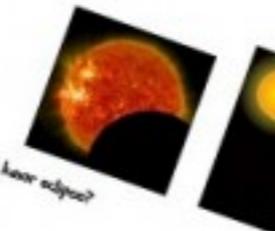

A lunar eclipse occurs when the Earth passes between the Moon and the Sun. The Earth's shadow obscures the moon or a portion of it.
