Display Settings

The settings below control the display of your calendar. If things don't look right, try switching between the three style sheet options or pick a page template from your theme.

There are going to be situations where no out-of-the-box template is 100% perfect. Check out our [our themer's guide](#) for instructions on custom modifications.

1

Basic Template Settings

Default stylesheet used for events templates

☐ Skeleton Styles

Only includes enough css to achieve complex layouts like calendar and week view.

☒ Full Styles

More detailed styling, tries to grab styles from your theme.

☐ Tribe Events Styles

A fully designed and styled theme for your events pages.

2

Events template

Default Page Template

Choose a page template to control the appearance of your calendar and event content.

Enable event views

☒ List

☒ Month

☒ Day

You must select at least one view.

Default view

Month

Disable the Event Search Bar

☐

Check this to use the classic header.

Month view events per day

3

Change the default 3 events per day in month view. To impose no limit, you may specify -1. Please note there may be performance issues if you allow too many events per day. [Read more](#).

Enable the Month View Cache

☒

Check this to cache your month view HTML in transients, which can help improve calendar speed on sites with many events. [Read more](#).

Date Format Settings

The following three fields accept the date format options available to the PHP `date()` function. [Learn how to make your own date format here](#).

Date with year

F j, Y

April 16, 2018

Enter the format to use for displaying dates with the year. Used when displaying a date in a future year.

Date without year

F j

April 16

Enter the format to use for displaying dates without a year. Used when showing an event from the current year.

Month and year format

F Y

April 2018

Enter the format to use for dates that show a month and year only. Used on month view.

Date time separator

@

Enter the separator that will be placed between the date and time, when both are shown.

Time range separator

-

Enter the separator that will be used between the start and end time of an event.

Datpicker Date Format

2018-01-15

Select the date format to use in datepickers
