

SplitString.java

*SplitString1.java X

```
/**
 * package com.string.examples;

/**
 * This program would split string at |
 * We use split() to break the string at |
 */
public class SplitString1 {

    /**
     * @param args
     */
    public static void main(String[] args) {
        String s1 = "Learn|Java|Like|Never|Before";

        String[] tokens = s1.split("\\|");
        //String[] s2 = s1.split(Pattern.quote("|")); //you need to import java.util.regex.Pattern
        int i = 0;
        while (i < tokens.length) {
            System.out.println(tokens[i]);
            i++;
        }
    }
}
```
