

Python

Remove Spaces from string

```
1 # remove leading and ending spaces
2
3
4 import re
5 words = ' Python is powerful... and fast; '
6 new_words = re.sub(r"^\s+|\s+$", "", words, flags=re.UNICODE)
7 print(new_words)
8
9 # begin
10 import re
11 words = ' Python is powerful... and fast; '
12 new_words = re.sub(r"^\s+", "", words, flags=re.UNICODE)
13 print(new_words)
14
15 import re
16 words = ' Python is powerful... and fast; '
17 new_words = re.sub(r"\s+$", "", words, flags=re.UNICODE)
18 print(new_words)
19
20 # remove all spaces
21
22 import re
23 words = ' Python is powerful... and fast; '
24 new_words = re.sub(r"\s+", "", words, flags=re.UNICODE)
25 print(new_words)
26
27 # remove duplicated spaces
28
29
30 import re
31 words = ' Python  is powerful...      and fast; '
32 new_words = " ".join(re.split(r"\s+", words, flags=re.UNICODE))
33 print(new_words)
34
35
```
