Snakes

(Comparing Fractions)

Materials: Small counters (one color per player), 1 dice

Object of the game: To create the longest snake on the game board.

Directions: On your turn, roll the dice. Find your roll in the chart. Look at the sign beside that roll. Next, find a space on the game board below that contains a problem where that sign can be used in the blank. You may cover any box with a correct example provided that it has not already been covered. If all of the boxes for that sign have already been covered, you do not get to cover any boxes, and it is the next player's turn.

When all boxes have been covered, each player counts his/her longest snake. To count your longest snake, look for the longest continuous path of your own counters on the board. Paths can continue vertically and horizontally, but not diagonally. No counter may be counted twice. The player with the longest snake is the winner.
