Job Title: Software Engineer UI Intern

Company Description:

Limelight Networks, Inc. (Nasdaq: LLNW) is the content delivery partner for thousands of entertainment, technology, enterprise and government entities around the globe. Limelight's mission is to securely manage and globally deliver digital content, building customer satisfaction through exceptional reliability and performance.

Job Purpose:

The Software Engineer Intern will be working on cutting edge and emerging technologies, and help drive the production and development for tomorrow's online video analytical needs.

This position will be located is located in Tempe. Position is scheduled Monday through Friday flexible hours through the summer.

Essential Functions:

- The opportunity to help redesign and unify various DNS platforms. You will have the opportunity to contribute to all parts of the software stack: from user interface and API design and implementation to relational databases, configuration management and Linux performance tuning.
- A growing agile, collaborative team that owns the platform and its performance, values each person's contribution, encourages innovative and experimental ideas, and believes passionately in shared code ownership.
- Shared responsibility for a platform that serves over 600 million page views per month on a multi-tenant, shared infrastructure architecture (SaaS) running on Python/C++/Linux/MySQL.
- The opportunity to contribute to platform-wide features, architecture and design decisions, and to develop end-to-end features.
- Participate in continually improving the software development processes and practices.
- A dedicated QA team that works collaboratively with developers.
- Become a key member of the team and make an impact on future system development.
