777X WING TRIM TOOL: WORLD'S LARGEST 3D-PRINTED OBJECT

The 777X wing trim tool, designed by Boeing research and development engineers and fabricated by Department of Energy researchers at the Oak Ridge National Laboratory, received the Guinness World Record title of "Largest solid 3D printed item." Boeing plans to deploy the additively manufactured trim and drill tool in the company's new 777-300ER production line.
