

TOP BENEFITS OF 3D PRINTING

MASS CUSTOMIZATION

The ability to create custom-build designs opens up doors to endless opportunities

NEW CAPABILITIES

Complex products which were impossible to make can be mass produced without high initial capital investments.

LEAD TIME AND SPEED

Shorter design process, and production cycles get products to market faster.

SUPPLY CHAIN SIMPLIFICATION

Production is closer to the point of demand with much less inventory

GREEN TECHNOLOGY

3D printing generates almost zero wastage of materials; compare that to traditional machining processes where 60% of material gets wasted

COST EFFECTIVE

Since molds and dies are not required, there is no cost associated for iterating your designs.
