

How to Join Specific Elements in a Python List?

```
lst = ['hello ', 'bye', 'world', '?', '!']
```

Method 1: Manual concatenation

```
lst[0] + lst[2] + lst[4]
```

Method 2: Slicing

```
''.join(lst[::2])
```

Method 3: Itemgetter + Join

```
from operator import itemgetter  
''.join(itemgetter(0, 2, 4)(lst))
```

Method 4: List Comprehension + Join

```
''.join([lst[i] for i in [0, 2, 4]])
```

'hello world!'
