

Tell Me About Yourself

- *Um* a little bit about myself, currently I am a senior studying chemical engineering at Texas A&M University. Right after graduating high school I started working at a lab here on campus. **I was really interested in getting my hands on some experience.** The position I received allowed me to **apply my knowledge** of chemistry and **problem solving** in a **hands on setting** while working towards the **goal** of optimizing and enhancing current protocols used in our lab.
- In addition to research I have also **developed strong interpersonal and communication skills.** Through being an undergraduate teaching fellow and **mentor** for first generation engineering students it has allowed me to interact and effectively **work with many different individuals.**
- While I gained invaluable experience as a student researcher and mentor, I am looking for an internship to allow me to become fully immersed in an engineering and business environment.
