

Rounding Decimals

Why do we Round?

Rounding is useful when we need to cut off a decimal that is very long. We often round when dealing with money since we don't have money smaller than pennies.

Ideas and Questions

Give examples of **Zero Pairs** that are not +1 and -1.

How are negative numbers used in **Zero Pairs**?

Rounding Decimals

Round to the nearest tenth.

1. $0.69 =$ 2. $0.482 =$
