

# A NATURAL ORGANIC HERBICIDE

## Description:

"Organic Weed Killer" is an extremely fast acting, non-selective weed killer. It is a 100% organic natural product based on coconut fatty acids and sugars. "Organic Weed Killer" is completely non-toxic, non-hazardous, highly biodegradable and based on naturally renewable resources.

## Features:

- **CONTACT** - will only kill that which it contacts. You can safely spray around vegetables, fruit and ornamentals if care is used to avoid contacting the desirable foliage.
- **SPEED** - starts killing immediately. The effect is noticeable within minutes and the once thriving weed is reduced to a brown skeleton within as little as 2 hours (not weeks). This allows identification of missed areas for re-spotting.
- **NO RESIDUE** - treated areas can be immediately replanted. No withholding time for fruit and vegetables. Concrete, bricks and paintwork are not stained.
- **CAT, DOG, BUDGIE and CHILDREN SAFE** - "Organic Weed Killer" is non-toxic to mammals and bees.
- **BROAD SPECTRUM** - will kill most weeds if the foliage is thoroughly coated. For stubborn weeds decrease the dilution.

## Organic Weed Killer

## Method of Use:

- Dilute 1 part "Organic Weed Killer" with 7 parts water (i.e. 1Ltr makes 7 litres ready use). For difficult perennials, very waxy leaves and kikuyu dilute 1:3.
- Shake lightly to mix.
- Spray onto weed foliage to thoroughly wet leaf surface.
- A second application a week later will finish off any remains that were not thoroughly covered.

## Area of Use:

- Total control of vegetable seed beds prior to emergence of desirable plants.
- Control of weeds in established garden by targeted spraying.
- Mowing strips along driveways and paths. Mowing circles around established trees and poles.
- Weed control between bricks, pavers and cobbles.
- Building maintenance - controlling moss, mould and lichen.
- Defining areas on playgrounds and sports fields.
- Targeted weed control in potted plants, rockeries etc.
