

MINIFS FUNCTION IN EXCEL

MINIFS FUNCTION IN EXCEL is used to find the minimum value such that it satisfies a given set of conditions including logical operators, wild cards.

SYNTAX & ARGUMENTS

=MINIFS(min_range, criteria_range1, criteria1,)

- **min_range**- Specify the range where we look for minimum value.
- **criteria_range1**- Specify the range where we apply our condition.
- **criteria1**- Specify the exact condition that we want to apply on criteria range.

The MINIFS function allows you to find the results by applying conditions on it. You can include logical operators and wild card characters in the criteria.

EXAMPLE

Let's take one example to understand.

Let us suppose I want to know the minimum marks in English. Use this formula :

=MINIFS(A2:A6,B2:B6,"English")

	A	B	C	D	E
1	Marks	Subject			
2	46	English			
3	45	Hindi			
4	32	English			
5	34	English			
6	23	Hindi			
7					
8	Formula	=minifs(A2:A6,B2:B6,"English")			
9	Result	32			
10
