

# MIN FUNCTION IN EXCEL

**MIN FUNCTION IN EXCEL** is used find and return the minimum value from range of numbers in excel.

## SYNTAX & ARGUMENTS

**=MIN(number1, [number2], .....)**

- **number1** – Specify the number, cell range or cell range to find the minimum value from.

You can enter up to 255 such arguments each separated by a comma.

Note that, the MIN function finds smallest number, date, time, currency, unit, percentage, fractions. Erroneous values, text, and logical values are ignored.

## EXAMPLE

	A
1	<b>Scores</b>
2	85
3	47
4	49
5	59

To return minimum number from the list of numbers, use this formula:

**=MIN(A2:A5)**

As a result, excel would return 47.

You can even pass constant values or named range as input argument.

	A	B	C	D
1	<b>Formula</b>	<b>=MIN(1/2,2/5,7/3,4/3)</b>		
2	<b>Result</b>	0.40
