

TYPES OF FINANCIAL FEASIBILITY

Financial feasibility refers to the degree to which a project is financially viable

This can be based purely on cost estimates for affordability, such as the financial feasibility of becoming an international student

01

Return on investment calculates not only costs but also projected returns

02

Calculating a payback period helps to predict how long it will take for an investment to break even

03

Impact may also be measured to calculate non-financial benefits of a new project, such as how many homeless people can be housed within its financial constraints

04
