News Anchor1: Good evening, this is the KFCE studios.

BREAKING NEWS! Is water denser than air? Some scientists believe that the chemicals in the water in Lake Loch Ness make water less dense than air. We go to Richard Nixon in the field.

Reporter1: Thank you Colin as you can see I am standing at the bottom of Lake Loch Ness. Up above me are untold amounts of water. Here with me is an eye witness to this catastrophe.

Eye witness: Hi ya I was sittin' here feshin' in me boat when oll of a sudden the water started to float upward wit me and me boat on top. It took the lads up in that wayward helicopter 2 hours to get me out.

Reporter1: Well I think that should give you a good picture of what happened here, now back to you in the KFCE Studios.

News Anchor1: We have with us right now in the studio two experts on hydrology the study of water.

Reporter2: Now for the opinion from our first expert Johan Sebastian Bach.
