Star Wars / Galactic Standard Calendar

Galactic Standard Calendar

(image: Wookieepedia)

The Galactic Standard Calendar is widely used across the galaxy for measuring time. Popularized by the Imperial City (the planet Coruscant), its months follow the orbit of Centax-1, Coruscant's primary moon; and its year follows the length of time it takes Coruscant to orbit its sun, Coruscant Prime.

It comprises 368 standard days, with each day being 24 hours long. There are 10 months in a year, and each
