

Write the `moveCandyToFirstRow` method, which attempts to ensure that the box element at row `0` and column `col` contains a piece of candy, using the following steps.

- If the element at row `0` and column `col` already contains a piece of candy, then box is unchanged and the method returns `true`.
- If the element at row `0` and column `col` does not contain a piece of candy, then the method searches the remaining rows of column `col` for a piece of candy. If a piece of candy can be found in column `col`, it is moved to row `0`, its previous location is set to null, and the method returns `true`; otherwise, the method returns `false`.

	0	1	2
0		 "lime"	
1		 "orange"	
2			 "cherry"
3		 "lemon"	 "grape"
