

1

```
public class Person
{
    public string Firstname { get; set; }
    public string Lastname { get; set; }
    public string Fullname { get; set; }
```

Press Alt while selecting an aligned block

```
public class Person
{
    priva string Firstname { get; set; }
    priva string Lastname { get; set; }
    priva string Fullname { get; set; }
```

and then just start typing...
here I'm changing three access modifiers at once...

2

```
public class Person
{
    public string Firstname { get; set; }
    public string Lastname { get; set; }
    public string Fullname { get; set; }
```

The sets are not aligned so I need to click Ctrl+Alt
and select each place I want a cursor to be

```
public class Person
{
    public string Firstname { get; privatset; }
    public string Lastname { get; privatset; }
    public string Fullname { get; privatset; }
```
