

We have been working with quadratic equations in Vertex Form, $y = a(x - h)^2 + k$. However, it is more common for quadratic equations to be given to us in Standard Form, $y = ax^2 + bx + c$. Today's assignment is for you to practice using FOIL to change equations from Vertex Form into Standard Form. Use the example below to guide your work.

Example:

$$\begin{aligned}y &= -2(x + 3)^2 - 5 \\y &= -2(x^2 + 6x + 9) - 5 \\y &= -2x^2 - 12x - 18 - 5 \\y &= -2x^2 - 12x - 23\end{aligned}$$

Given,
Multiply the quantity squared. (FOIL)
Distribute the a .
Combine like terms.

$$\begin{array}{r|rr} & x & +3 \\ \hline x & x^2 & +3x \\ +3 & +3x & +9 \end{array}$$

$x^2 + 3x + 3x + 9$

Problems:

1. $y = 6(x - 4)^2 - 1$	2. $y = \frac{1}{8}(x + 4)^2 + 6$	3. $y = -5(x - 1)^2 + 4$
4. $y = -\frac{3}{8}(x + 6)^2 - 1$	5. $y = 4(x + 2)^2 - 8$	6. $y = -\frac{2}{4}(x - 9)^2 - 2$
7. $y = (x - 2)^2 + 7$	8. $y = (x + \frac{1}{2})^2 - 2$	9. $y = 18(x - \frac{1}{2})^2 + 5$
10. $y = -2(x + \frac{1}{2})^2$	11. $y = 13(x - 2)^2 + 15$	12. $y = 2(x + 8)^2 + 10$
