

react-google-maps makes using the Google Maps JavaScript API in React applications easy.

React Integration

Use a Google map as a fully controlled reactive component and use all the other features of the Google Maps JavaScript API.

Extensible

Includes components and hooks to make writing custom components easy.

Part of vis.gl's Framework Suite

Use together with e.g. [deck.gl](#) to render performant and compelling 2D and 3D WebGL visualizations on top of your maps.
