

## ECOSYSTEM

An **ecosystem** is the interactions between living and non-living things in a particular environment. It is a place where these interactions occur, such as water, or a forest. All organisms and parts within this place are interacting all the time and adjustments are done by the living Organisms to survive.

Ecosystems vary in size and complexity. Non Living things with which living things, like plants and Animals interact are Air, Water, Land. The Habitat is a part of an Ecosystem. Biome is like the town where an animal lives.

### Let's Try 😊

(1) A large geographical area with a certain climate is called **B**\_\_\_\_\_ . It is like the town where an animal lives.

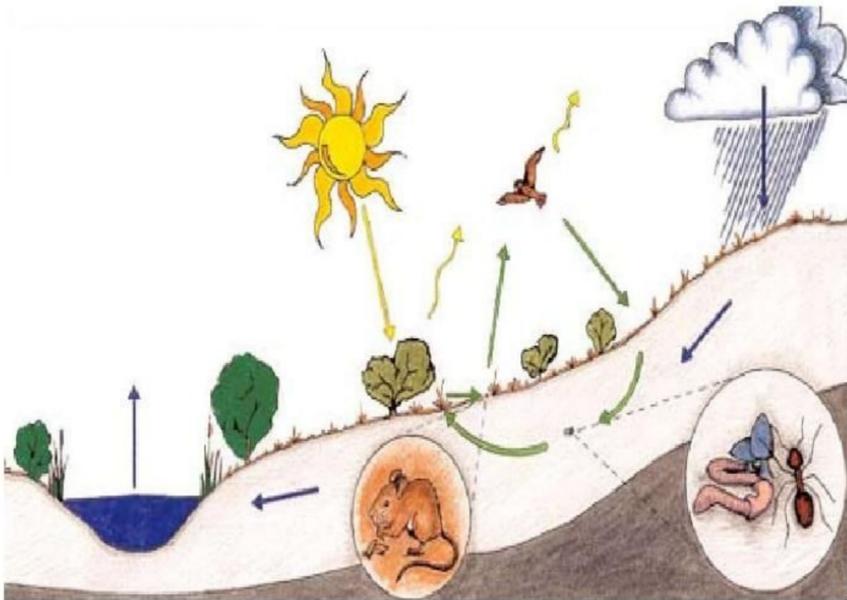

(2) An \_\_\_\_\_ is interaction between living and non living things in an environment.

(3) A habitat is a part of an **E**\_\_\_\_\_ .

(4) An ecosystem can be as small as a puddle or as large as the \_\_\_\_\_

(5) Below is the picture showing an ecosystem. Name 2 living things and two non living things

(a) Living things \_\_\_\_\_

(b) Non Living things \_\_\_\_\_

(c) Sunlight is received by \_\_\_\_\_

### 6. One word answer :-

(a) Weather in a place all year \_\_\_\_\_ .

(b) All living things of the same kind. \_\_\_\_\_ .
