

WHAT IS COMPUTER PROGRAMMING

- Computer Programming is the process of creating computer programs.
- A program is a set of instructions that tell a computer what to do.
- A program is created using a programming language.
- A programming language is a language that can be used to communicate with a computer. Therefore a programming language is the equivalent of a language such as English when it comes to communication with computers.
- There are several programming languages in existence today. I will list the most common ones.
