

Which of the following statements is true?

- ☒ a) Safety stock is greater under a continuous review system compared to a periodic review system
- ☐ b) Probability of a stock out is equal to "cycle service level"
- ☐ c) If cycle service level is 50%, then safety stock equals 0.
- ☐ d) Different cycle service levels when comparing a periodic review system and continuous review system will always produce different safety stock values.
- ☐ e) As the cycle service level increases, safety stock decreases
