

Out[50]:

	Job_Start	time
0	Demolition	2022-05-20 08:07:22
1	Construction	2022-05-27 07:34:01

# Python: Convert Datetime to Date using Pandas

ON JUNE 8, 2022 / BY BEN LARSON PH.D. / IN PYTHON

To convert a datetime in a pandas dataframe to date use the dt.date function:

```
df['column'] = pd.to_datetime(df['column']).dt.date
```

To demonstrate, first let's build a dataframe

```
import pandas as pd
df = pd.DataFrame({'Job_Start': ['Demolition', 'Construction', 'Cleanup'],
                  'time': ['2022-05-20 08:07:22', '2022-05-27 07:34:01',
                           '2022-06-01 09:12:11']})
```

```
In [48]: import pandas as pd
...: df = pd.DataFrame({'Job_Start': ['Demolition', 'Construction', 'Cleanup'],
...:                   'time': ['2022-05-20 08:07:22', '2022-05-27 07:34:01',
...:                             '2022-06-01 09:12:11']})
```
