

Macro to Pull Data from Another Workbook

```
Application.ScreenUpdating = False      ' Do not update the screen.

Dim src As Workbook
Set src = Workbooks.Open(sTheSourceFile, True, True)    ' Open the source file.

Dim objSourceWs As Worksheet           ' Create worksheet object

' Copy data from all worksheets in the source file.
For Each objSourceWs In src.Sheets
    Sheets(objSourceWs.Name).UsedRange.Copy _
        Destination:=ThisWorkbook.Sheets(objSourceWs.Name).Range("A1")
Next

Application.ScreenUpdating = True
```
