

Pneumonia is a serious respiratory infection that takes the lives of more children in the developing world than any other condition.

Clean cook stoves
which improve
air quality.

Antibiotics, like
amoxicillin, which cost
less than US\$1 per dose

Exclusive
Breastfeeding

Vaccines, including those
for pneumococcal disease
and rotavirus

Overlapping Protection

Preventing both conditions requires:

Basic
Sanitation

Safe drinking
water

Oral Rehydration
Salts (O.R.S)

Zinc
Supplements

Diarrheal disease is the most common illness among children in the developing world and can lead to dehydration and death.
