

OFFSET Function in Excel

The screenshot displays the Microsoft Excel interface with the **Formulas** tab selected. The **Lookup & Reference** group is active, and the **OFFSET** function is highlighted in the dropdown menu. A red arrow points from the **Lookup & Reference** group to the **OFFSET** function. Another red arrow points from the **OFFSET** function to a tooltip box. The tooltip box contains the syntax **OFFSET(reference,rows,cols,height,width)** and a description: **Returns a reference to a range that is a given number of rows and columns from a given reference.** Below the description is a link to **Press F1 for more help.**

In the background, the Excel grid shows cell A1 with the formula **=OFFSET(** and a yellow highlight on the formula bar showing the full syntax: **OFFSET(reference, rows, cols, [height], [width])**.
